

APPLICATION REFERENCE for Audi MMI-MOST software versions (MP3 Support) • APPLIES TO: GROM-MST3-AUDO for Audi MMI-MOST

APPLICATIONS:

- A6 2005-2009
- A8 2004-2008
- Q7 2007-2009
- RS6 2008-2009
- S6 2007-2009
- S8/R8 2008-2009
- Allroad 2008-2009 (Model not available in U.S.)

Reason: Audi MMI on MOST, specifically in the 2004-2006 models, had older software that did not support Mp3 Playback . Prior to installation, It should always be checked to see which version Audi MMI software version is system current running. This will establish if a Software Update to the Audi MMI system is required to work with the GROM-MST3-AUDO.

To check Audi MMI software version:

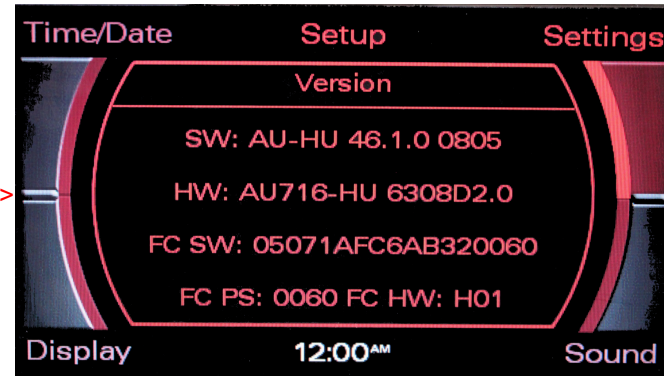

Under car settings (setup) menus, you should find the main MMI version.

Try button ‘Car’ then under Setup > Version.

On the top line should read something like:

Example versions:

(12-digit format) (8-digit format) SW: D3-HU XXXX YY.Y.Y.ZZZZ or YY.Y.Y ZZZZ (see photo to the right, example has software version 4610, which is new enough to support MP3)

Examples:

MMI SW: D3-HU 6300 07.7.0 0406 (means version 0770 – needs updating)

MMI SW: D3-HU 33.6.0 0632 (means version 3360 – new enough, OK)

The YY.Y.Y is what you are looking for, this is the main MMI software ‘index’ or version:

- If it's between 0500 and 2860 the MMI software is **too old** to properly support BT/telephone and **needs to be updated**. Dealer can do this or it can be done with Audi parts CDs/DVDs.
- If it's somewhere at least 3360 and “newer”, the MMI is probably sufficiently up-to-date to support MP3.

After the Audi MMI has been ensured to be properly up-to-date, you can proceed* with installation of GROM-MST3-AUDO
